

CS359 - Web Programming

Instructions on how to run the project

Fall Semester 2024-2025

Spyridon Chrisovalantis Zervos (csd4878)

Rafail Drakakis (csd5310)

Installation Instructions

1. Run **XAMPP** and activate the Apache and MySQL modules.
2. Open the project, ideally using an IDE (e.g., *IntelliJ*).
3. Run the REST API:
 - Navigate to `src/main/java/services/RESTAPI.java`.
4. Depending on your environment:
 - a. If using *IntelliJ*, create an `E199:war exploded` artifact.
 - b. Create a Tomcat configuration for the web app. Ensure the URL is set to:
`http://localhost:5000/E199_war_exploded/`
Attach the artifact to the configuration if using *IntelliJ*.
5. Run the web app using the configuration created in Step 4b.
6. Open a browser (e.g., *Google Chrome*) with CORS deactivated.
7. Paste the URL:
`http://localhost:5000/E199_war_exploded/`
into the search bar to open the app. Have fun browsing!
8. (Bonus) Click anywhere to hear some *qUaLiTy mUsIc!*
